Abstract of corresponding document: EP1249873

A light emitting device, free from change of color even when the wavelength of a light emitting element shifts, includes a light emitting element (106) for emitting primary light having an intensity peak at a wavelength shorter than 400 nm; a silicone resin (111) provided to embed the light emitting element, and a fluorescent element (110) contained in the silicone resin to absorb the primary light and release visible light.
